

An administrative decision made earlier this year prevented Senior House from accepting any freshman residents this fall.

## Turnaround team has held its first meeting

S3 staff member to live in Senior House

By Isabelle Phinney and  
Ally Huske

Due to concerns of low graduation rates and illegal drug use, Senior House was withdrawn from the freshmen housing lottery and FYRE this year.

The class of 2020 received notice of Senior House's withdrawal two days before the housing lottery was originally set to close and were granted an extra three days to submit

the application.

As *The Tech* previously reported, only six freshmen ranked Senior House as first in their application. However, in previous years, typically between 15 and 30 freshmen ranked Senior House first. At the time of the announcement, more than 800 freshmen had submitted their applications. The discrepancy may be due to the deadline or simply to the

## New DormCon lays out year's goals

The Dormitory Council had its first meeting of the year last Thursday. Located in Maseeh, the two hour long meeting meandered through issues such as dining, summer storage, font sizes, security, and the ideal location of kitchens in dorms.

With the new year comes a new executive and new objectives. Kate Farris '17, DormCon president, and Ji Yuge '18, vice-president, listed via email the renewal of the dining contract, improving the dorm security experience, and improving PartySafe training as upcoming issues and goals.

Acknowledging current relevant issues on campus, they

added, "DormCon also supports individual communities as needed, including Senior House and New House, and on other issues as they come up during the year."

But it was an issue with CPW funding that sparked a rapid back and forth. "New House spends \$1,200 on CPW," Sarah Wharton '17, New House president said, "we're supposed to be advertising MIT." Although other dorm presidents agreed, Sarah Melvin '18, Senior House president, raised concerns about the hypothetical funding change: "[Funding it ourselves] does give us some control. Otherwise, MIT can make CPW whatever they want it to be."

—Olivia Brode-Roger

## Class of 2020 sticks with New House

Lack of clarity did not deter freshmen from wanting to live in dorm

By Melody Tan

The future of New House — which might include demolition or renovation after May 2017 — is uncertain.

What is certain is that the current New House building will not house residents in the coming years, making way for work crews who will address issues caused by flood damage and corroded steam risers.

Incoming freshmen were not formally informed of the development

when filling out their housing lottery. However, the news circulated widely last spring, and New House government informed all new residents upon arrival. This raised concerns that freshmen would rank New House low on the housing lottery list or use FYRE to move to another dorm.

Despite the impending closure, many freshmen don't appear to have changed their opinions about the dorm.

*The Tech* spoke with several New

House freshmen about their experiences with the plans. Conrad Goffinet '20 recalled that he had heard about the plans for New House while filling out the housing application.

The news "did not affect my decision," he said. Though Goffinet later did switch to East Campus, he said he moved because he "enjoyed the culture more and had also made friends in East Campus."

Other residents factored the

## WEATHER

# Cool, sunny weather locally, Julia spins off the Carolinas

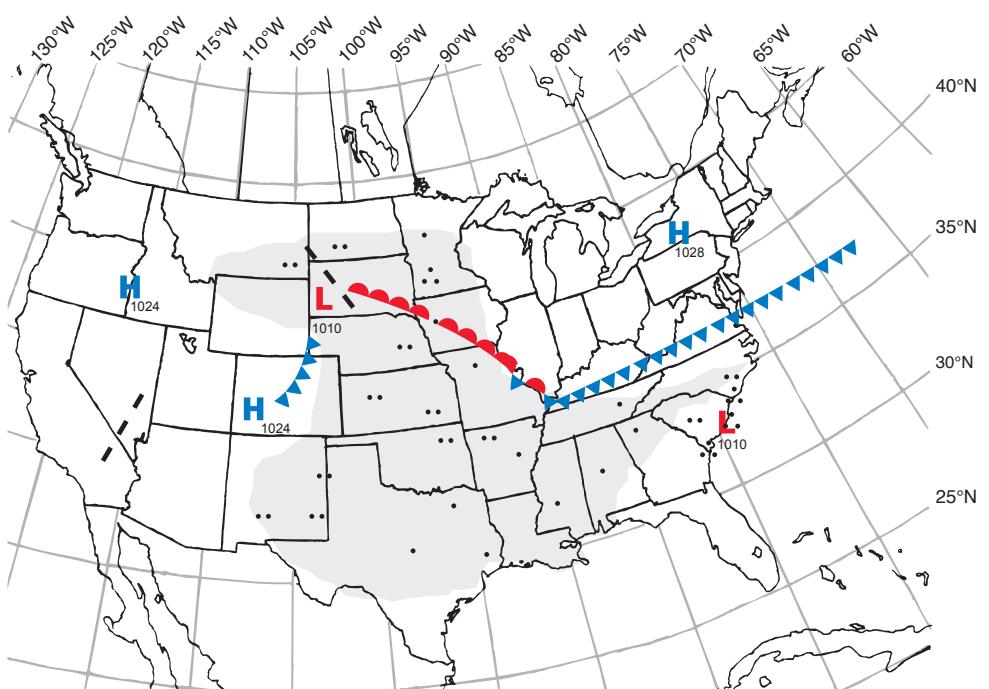

**By Jordan Benjamin**  
*STAFF METEOROLOGIST*

Cooler, seasonable conditions will overspread the region in the wake of Wednesday's cold front. That front brought isolated but much-needed rain to Eastern Massachusetts, which remains in the midst of a persistent severe drought. Locally, clear skies and high temperatures in the mid 70s will persist into the weekend before another system approaches from the west by Sunday, bringing a cold front and another opportunity for precipitation. Near the

CORRECTIONS

A photo of an eye chart hack on the front of last week's paper was incorrectly credited to Robert Rusch. In fact, the photo was taken by Tristan Honscheid.

Last week's FYRE chart mistakenly flipped the number of first-year students wanting to FYRE in and wanting to FYRE out. In addition, there were eight students, not seven, who wanted to FYRE out of Burton-Conner. Finally, the Division of Student Life provided *The Tech* with the number of first-year vacancies for each dorm.

To the right is a chart with the information displayed correctly. In order to better contrast it with last week's chart, the dorms remain ordered by total capacity.

# Class of '20 hopes to move in this spring

## In search of unique Haus culture

Senior, from Page 1

culture of the freshman class.

Chancellor Cynthia Barnhart PhD '88 explained that Housing worked with the six freshmen to ensure they were granted their second choice in housing. She said that none of the six participated in FYRE in the fall.

Some students expressed a desire to reopen Senior House to the Class of 2020 in the spring, citing the nonjudgmental culture and well-maintained facilities among other reasons. Senior House's culture is generally known to be LGBT-positive, sex-positive, and artistic.

**S3 Staff Associate Joe Zimakas will be living in Senior House and will have drop-in office hours for residents.**

Omar Laris '20 stated, "During my time at CPW, everyone [at Senior House] was super kind and welcoming, and I grew very attached to the dorm very quickly. I left CPW set on MIT mainly because I felt like I'd found a place I would like to live... When the news was announced that Senior House would be closed to freshmen about a week before the application closed, I had a lot of strong feelings. I was angry and sad and generally devastated... It was really disheartening to feel like I was at odds with an administration I hadn't even met yet."

Dylan Marlborough '20, after hearing the news, spoke with DormCon about the possibility of opening Senior House to FYRE. Although his petition was unsuccessful, he said, "I hear there's talk of sort of pushing to let freshmen live there in the spring semester, so I'm hopeful."

However, Barnhart is still unsure what will happen this spring. She explained that "it is too soon in the turnaround process to speculate about what may happen in the spring or in the 2017-18 Academic Year. Our focus right now is on working with the Senior House community to build on the progress we made together over the summer."

## New House student government reassures residents of community

New, from Page 1

news into their FYRE considerations; many looked more seriously into FSILGs. However, given the inconvenience of packing and unpacking and the strength of connections already made, most have chosen to stay for this year.

Interviewed freshmen have cited a number of reasons for picking New House, including spacious rooms and facilities, meal plan flexibility, and, most importantly, dorm culture.

House 5 resident Alexa Guan '20 explained that she was drawn to the opportunities to interact with people of different cultural backgrounds. Regarding her decision to stay in the dorm, she emphasized the kindness and support she and the other freshmen have received from the people of New House.

Alonso Espinoza Dominguez '20, a Spanish House resident, summarized a feeling that many other New House freshman can echo: "Once here, I was able to witness just how awesome of a community this is, further convincing me I made the right choice."

That sense of community will soon be put to the test. The New House government has reassured residents that, in spite of the impending lack of a physical house, they "can be assured that we do take care of each other."

# Indie game developers and enthusiasts join to celebrate a growing medium

MIT hosted the Boston Festival of Indie Games this weekend

# Boston Festival of Indie Games

### **Johnson Athletic Center**

# Saturday, September 10, 2016

**By Gabe Fields**

STAFF WRITER

This past Saturday, September 10, marked the fifth annual Boston Festival of Indie Games (abbreviated as Boston FIG), held in MIT's Johnson Athletic Center. For the better part of a day, attendees and exhibitors alike walked around the venue and played each other's games, both digital and tabletop in format. The games on display numbered over 100, and varied widely in genre, scope, and style. Throughout the day, participants could vote for their favorite games, and at the festival's close there was an awards show, "The Fig-gies," celebrating the best and most interesting games exhibited.

For those unfamiliar with the term, indie games are those created without backing from a publisher, usually by a small team of developers or even a single person. Because of the way they are made, they are often quite financially risky, but allow creators a great deal of freedom in what they are able to make. The digital indie game scene has sprung up and flourished over the last five to eight years, made possible in part by distribution platforms like Steam that allow developers to sell their games directly to consumers.

Boston FIG is all about celebrating these creators, exposing their games to greater audiences, and fostering a strong and supportive community. The developers exhibiting games ranged from large teams who had left big studios, to single designers devoting all of their time to their games, to even a group of Cornell students showing a game they had made in a game design class. The prevailing feeling of the festival was one of camaraderie, inclusivity, and total enthusiasm about everybody's work.

When the Figgie awards came around, the biggest ones given out were the best in show awards, decided on by a panel in advance, and the audience choice awards, which attendees voted on throughout the day. Tabletop and digital games were evaluated and granted awards separately. The audience choice winner for tabletop games was *Wicked Apples* by Robert Fowl-er, a game where players "eat" a variety of apples with different abilities and try to trick their friends into eating the dangerous ones. It's a game with a certain amount of randomness, which adds in strategy and manipulation. The winner of best in show for tabletop was a game called *Faulty Mans*.

In the realm of digital games, the audience choice winner was *Ape Out* by Gabe

**An attendee at the Boston Festival of Indie Games tries out Intern Astronaut**, a virtual reality game in which players are tasked with piloting a spaceship.

Cuzzillo, a fast-paced, stylistic game where you play as a gorilla escaping captivity and smashing the crap out of everybody trying to stop you. *Ape Out* also won an award for compelling game loops earlier in the night. The winner of best in show was *Perception*, a game which also won an award earlier in the night for worldbuilding and narrative. Created by The Deep End Games, a team of former big studio developers who worked on games like *Bioshock*, *Dead Space*, and *Rock Band*, *Perception* was Kickstarted into existence last year, raising over \$150,000 on the online funding platform. The game takes horror in a completely new direction: you play as a blind woman investigating a haunted house and uncovering its secrets. She can only see by clicking her tongue to echolocate, giving the game a novel visual style with the caveat that if you click to see what's in front of you, it might give you away if there's something (or someone) there. The lessons the designers learned from working on the *Bioshock* games are clearly evident, manifesting themselves in smart level design that subtly guides but doesn't restrict the player, as well as — love it or hate it — audio diaries.

The festival's theme this year was "mosaic," with the intent of promoting and showcasing games that speak to a diversity of experience, accessibility, and intent. This was highlighted by some interesting

choices of award categories, such as the accessibility and inclusion award for digital games, which was won by *HEARTREAD*, a game by Matt Surka that uses only audio to tell its story, making it accessible to people of all seeing abilities. *eBee*, the winner of most innovative tabletop game, had players of all ages create circuits by combining quilted pieces, which were all hand-sewn with embedded electronics. It was created by a team of students from Northeastern University.

The winner of the tabletop award for cultural mosaic was *Blabber Mouthz* by Tricia McLaughlin, a game in which players try to lip read each other, an attempt at capturing the experience of being deaf. Then there was *Anamorphine*, a 3D digital game by Artifact 5 that tries to depict the process of coping with depression and loss, and which won the award for art and experimental digital games. The player is guided through a surrealist landscape and told a story with no voice-overs, only the sound of the main character's dead wife playing the cello to beckon you forward.

The festival also had some games made for virtual reality, my favorite of which was *Intern Astronaut*, a game by Broken Door Studio for the Samsung Gear VR that has the player trying to figure out the controls for the cockpit of a spaceship, which change on every play and involve spin-

ning knobs, flipping switches, and hitting buttons. The frenetic pace of the game, coupled with its developer's absolute enthusiasm in selling its concept, made the experience a lot of fun.

My favorite part of the day by far, and a moment that I feel really captured the spirit of the festival, was when I walked by *Temple Scramble*, a game by Birdwards where one player uses the arrow keys to navigate a temple and get to the treasure, and the other player uses the mouse to rearrange the temple and stop the adventurer. There was a father and son playing, and the son, who was probably around seven years old, was having the most fun I've ever seen somebody have playing a game. He was laughing hysterically, screaming, "Again!" after each time he played, and a small crowd started to gather just to observe his glee in cutting his dad off from the treasure. The woman showing the game was just grinning, and when I went up to ask her about it, she said that the game was actually made by her brother, and she was showing it for him. And that's what the festival was: a little scrappy at the edges, but in the most endearing way. There was a spirit running through the day of playfulness, exploration, inclusivity, and the mutual appreciation of one another's work, because in the indie community, banding together is better than going it alone.

**Attendees demo the virtual reality game Swing Star**, a platform game where players attempt to swing from block to block in a quest to ring a mysterious bell and save their world.

MIT Engineers look on as the third quarter wraps up. The score was 0-17 at the time.

Jared Hanson '18 wards off Becker's defense to gain yardage.

## Baseball conference at Boston University

*Brings together GMs, players, analysts, fans*

By Ahaan Rungta  
SPORTS STAFF

On August 13 and 14, hundreds of writers, scouts, officials, fans, and former baseball players attended the Sabermetrics, Scouting, and Science of Baseball weekend seminar held at Boston University's Metcalf Science Center.

Brought together for the benefit of the Jimmy Fund and the Angioma Alliance, the annual seminar advertised that it puts "[attendees] up close with some of baseball's top coaches, statisticians, scouts, doctors, and scientists."

During the event, speakers from various backgrounds gave talks. They tried to convey how science blends with advanced baseball statistics, traditional scouting assessments, and more.

Over the two-day Saberseminar, primarily organized by Brooks Baseball pioneer Dan Brooks, speakers included former MLB players John Baker and Brian Bannister, *Boston Globe* columnist Alex Speier, Arizona Diamondbacks assistant general manager Bryan Minniti, and Boston Red Sox president of baseball operations Dave Dombrowski.

*The Tech* was in attendance Saturday and was involved in the question-and-

answer sessions with GMs Minniti and Dombrowski. Dombrwoski found himself primarily surrounded by Red Sox supporters, and was able to share informative stories about his endeavors in baseball and his growth into someone with a high-tiered role in a serious organization located in a passionate city.

On the other hand, Minniti was grilled with deep organizational questioning, with several minds pointing to the infuriatingly disappointing 2015-16 offseason. The Diamondbacks are in the midst of a dreadful season that even has all-star first baseman Paul Goldschmidt overlooked.

With some Arizona fans in attendance, however, Minniti was also able to talk about the upsides of his endeavors as a young assistant GM so far and handled the tough crowd at the conference with confidence and astute reasoning.

The Saberseminar organizers plan to run the instructive and wide-ranging event in future years. All money raised at the conference serves as aid for the Jimmy Fund and the Angioma Alliance. Saberseminar is open to everybody interested in learning more about baseball and how they can get involved with the game, and invites anybody passionate about the intricacies of the game to purchase tickets for future years.

### SPORTS BLITZ

**Women's tennis (3-0)** blanked Springfield 9-0.

**Women's soccer (4-2)** defeated Roger Williams University 3-0. Julia Goupil '18, Hailey Nichols '19, and Olivia Struckman '18 found the back of the net for the Engineers.

**Field hockey (4-1)** rallied from a 0-3 deficit to defeat Endicott College 4-3. Emily Penn '18 scored her second hatrick of the season.

**Women's volleyball (8-2)** won in straight sets against WPI. Abby Berties '19 and Megan Gebhard '17 led the team with 13 kills apiece.

# Football loses 17-10 to Becker College

By Zachary Collins  
SPORTS STAFF

MIT (0-2) dropped their second straight game losing to Becker College 17-10 this past Saturday. The Engineers rallied after being down 17-0 in the third quarter but their comeback bid was thwarted after failing to recover an onside kick.

MIT quarterback Udgam Goyal '19 completed 23 of 41 passes for 193 yards and a touchdown while wide-receiver Eddy Garcia-Montes '19 caught 7 passes for 94 yards. Running back John Robertson '20 ran for 69 yards on 14 carries.

On the other side of the ball, linebackers Anthony Emberley '17 and Kodiak Brush '17 lead the team with 9 tackles each.

Becker quarterback Nas Sinkfield-Shelton completed 16 of 30 passes for 180 yards and carried the ball 12 times for 37 yards and a touchdown.

The first quarter proved to be sloppy. An unexpected rain shower passed through, leaving some fans in attendance scrambling. The weather seemed to leave obvious effects on the field. The two teams collectively turned the ball over three times and had a few inadvertent snaps that didn't help their cause. Neither team was able to score, ending the first quarter scoreless.

At the start of the second, the weather cleared but neither offense seemed to pick up any traction. MIT's defense played well, but the offense struggled to get the ball down the field.

After starting a drive around the 50-yard line, Becker gambled on a fourth-and-two and it paid rich dividends. Sinkfield-Shelton was able to run it into the end zone and score the first set of points in the game.

As the half dwindled down, MIT defensive back Rob DiSanto '18 made a great

interception that seemed to give the Engineers some momentum. However, they committed another turnover on the first play of the drive that let Becker get into scoring position and up the score 14-0 to end the half.

Through the start of third quarter, both sides failed to make significant movement up the field. A three-and-out drive by MIT and a 30-yard completed pass by Becker got the opponents in field goal range which they converted making the score 17-0.

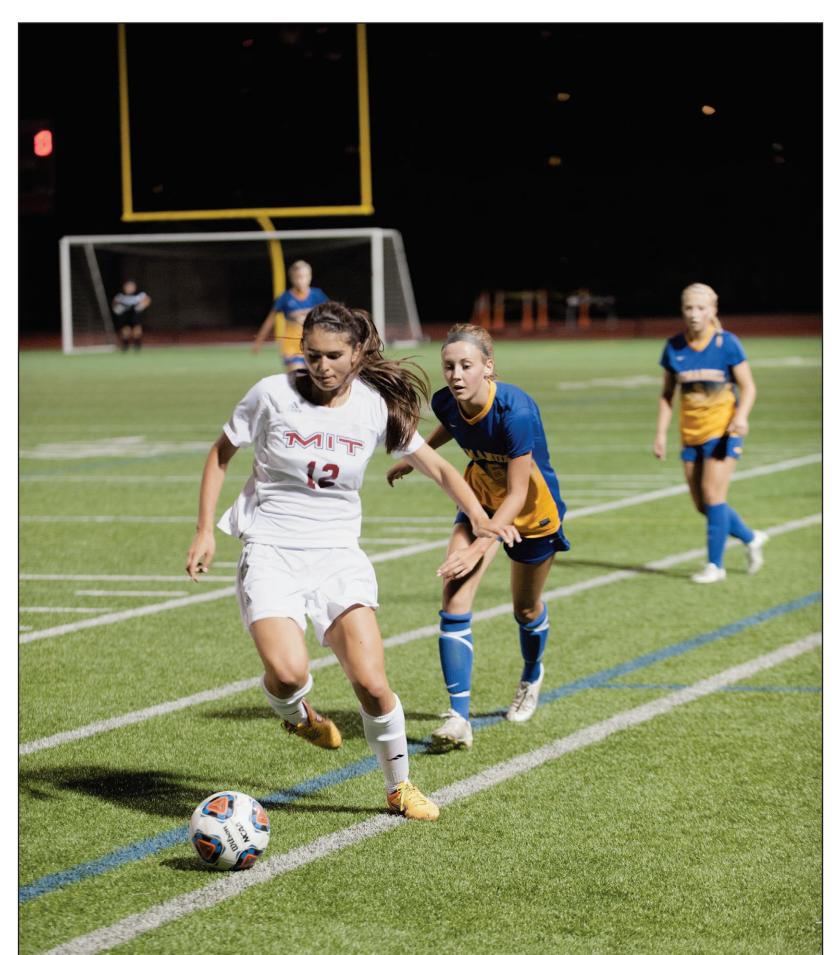

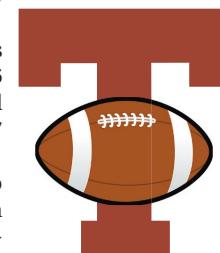

MIT seemed to find some life at the start of the fourth quarter. Robertson was able to find holes in defense and Goyal completed a few passes, including a 53-yard bomb to Eddy Garcia-Montes that got them in field goal range and allowed them to finally get some points on the board.

After slowly chugging their way up the field and draining the clock down to around five minutes, Becker was in scoring position once again. However, MIT's Matt Nicolai '18 picked off a pass and ran it back 44 yards before being taken down at the Becker 47 yard line. MIT fans, especially those that witnessed the near comeback last weekend, were excited.

With 2:35 left on the clock, MIT got the ball again. Goyal was great on the ensuing drive, going 5-7 on passes before making a 6-yard completion to Jared Hanson '18 for the touchdown. The score was 17-10 with just over a minute left in game.

The Engineers lined up for the onside kick, hoping to recover it as they did last week against WPI. They got the bounce they wanted and were able to get in on the scramble.

MIT plays again next week against Rensselaer on Saturday, September 17th, hoping to claim their first win after starting the season 0-2.

Jane M. Fessenden '18 protects the ball during last Thursday's game against Emmanuel College. The Engineers beat Emmanuel College in their first home game of the season 4-0.

## MIT APPLICATION ESSAYS THAT WORKED

# Dancing after a double surgery

*Editor's note: This is part of a series of MIT application essays submitted by students who were later admitted to the Institute. The following prompts are from the 2016-2017 admissions season.*

**Prompt**

We know you lead a busy life, full of activities, many of which are required of you. Tell us about something you do for the pleasure of it. (100 words or fewer)

**Response**

I love putting on makeup. There is something extraordinarily satisfying about choosing different colors and textures to put on my face exactly how I please.

In addition to daily swoops of eyeliner, I also enjoy technical special effects makeup. For the horror-themed dress up day during homecoming last year, I woke up at 5 a.m. to put on a "creepy doll" makeup look of my own design, created entirely out of liquid latex, toilet paper, eyeshadow, and fake blood.

Whether terrifying or not, makeup is a relaxing and creative way for me to express myself.

**Prompt**

At MIT, we seek to develop in each member of our community the ability and passion to work collaboratively for the betterment of humankind. How have you improved the lives of others in your community? (This could be one person or many, at school or at home, in your neighborhood or your state, etc.) (200-250 words)

**Response**

Matsuyo wrapped her aged hands around mine. She had been uncommunicative and unable to feed herself for some time. Slowly, she began mouthing along as I sang "Aki-no-yuuhi," a traditional Japanese melody. This simple song about foliage in the setting sun had finally broken through the fog of her dementia.

The care managers told me that, from then on, Matsuyo became more alert and began feeding herself again. I am so thankful that I could break down this barrier with my Japanese and music abilities.

Matsuyo is one of the residents living at Sunrise Senior Living; I have spent over 400 hours volunteering there. My responsibilities at Sunrise include spending one-on-one time with residents and leading group activities such as exercise, current events, meditation, flower arrangement, sing-alongs, baking, and gardening. I also began a weekly "Summer Arts and Crafts with Grace" activity and taught crocheting, sculpting, painting, and jewelry making. I sometimes give violin concerts as well. The residents and staff at Sunrise got to know me so well that Sunrise offered me a job (which I unfortunately could not take), and one of the residents, Mama T, refers to me as her granddaughter.

Volunteering has made me appreciate that members of my community are indeed my family, and family members

look out for and support each other. Not only was I given the opportunity to enrich these residents' lives, but they also in turn greatly enriched mine, in the infinitely rewarding moments involving something as simple as a Japanese melody.

**Prompt**

Tell us about the most significant challenge you've faced or something important that didn't go according to plan. How did you manage the situation? (200-250 words)

**I spent my entire summer on the couch, nauseous, frustrated, and elevating both ankles above heart level at all times.**

**Response**

Theatergoers watching my high school's spring musical "Anything Goes" may have noticed one eager and aptly-named Angel Grace smiling from under her blonde 30s wig and tap dancing her way through the entire show. However, they were oblivious to the physical and mental exhaustion this energetic performer endured to achieve that place onstage.

I was born with hyperpronated ankles which causes chronic foot pain. After fruitless physical therapy sessions, my doctors recommended surgery. Not one to miss any school, I elected to have both

surgeries the summer before my junior year, only fourteen days apart.

Thus, I spent my entire summer on the couch, nauseous, frustrated, and elevating both ankles above heart level at all times. When school started, I was just starting to use crutches to move around clumsily.

A few weeks after the beginning of school, our choreographer started weekly after-school tap workshops in preparation for "Anything Goes" in the spring. Immediately, I made up my mind to go. While

everyone clicked out their time steps and shuffle off to buffaloes, I sat in a chair in my ace bandages and orthopedic shoes, frustrated, humiliated, and trying to mimic their movements. I was a complete novice, but slowly, slowly, I learned how to tap.

After an entire semester of hard work, the "Anything Goes" cast list was posted, and I received a featured tap role. Throughout the show, Angel Grace's heels clicked the stage with well-practiced precision, her upturned face glowing with elation and triumph.

—Grace Kuffner '20

## Friends Meeting at Cambridge Invites You to the Adventure of Quaker Worship

10:30am &amp; 5pm Sunday • 8:30–10am Wednesday

Line Drawing: Lucy Sikes

- ❖ We are a community that seeks to pray seriously and tries to avoid dogma and ritual. We have no creed.
- ❖ Sometimes our deepest meetings for worship take place completely in silence. Most often three to six messages are offered in the course of roughly one hour of worship together.
- ❖ Our worship is not programmed and is not led by a minister. We aspire to be led only by the promptings of the Spirit in our hearts and minds.

*Quakerism has deep roots in Christianity.*

*Today, active Friends Meeting participants include people from many religious traditions: Christianity, Universalism, Non-theism, Buddhism, Judaism, etc. Many LGBTQ folks participate in our community.*

**All are welcome in a sincere search for spiritual depth**

# DSL unaware of changes until reached by *The Tech*

*Root issue seems to be miscommunication with dining service provider Bon Appetit*

## Dining, from Page 1

ed, Cummings said, was to change the apparent superiority of some dorms over others.

**The leadership of the Division of Student Life appeared to be confused when *The Tech* relayed news of the much-protested standardization of dining food to them yesterday.**

When asked about information disseminated to the student community in two emails from Greta Farrell '18, Next House Dining Chair, Cummings reiterated that the pilot program was initiated by MIT, and was not a decision from "Bon Appetit corporate headquarters," as Farrell's first email claimed.

Upon learning of the standardization of dining food, Cummings said that he would "definitely look into this" and contact Bon Appetit about the issue.

"I'm sorry this... was implemented in a way that was not what we envisioned."

To a surprised Matthew Bauer, DSL's head of communications, *The Tech* confirmed that if, for example, Maseeh was serving chicken parmesan, then every other dorm was also invariably serving chicken parm.

At the time of this article's writing, Bon Appetit had not responded to Bauer's requests for comment, sent soon after the interview.

It is clear that a severe miscommunication occurred between

MIT and Bon Appetit. It is unclear, however, how this miscommunication was carried all the way to policy change before those responsible were apprised of the sit-

[they] knew they would have to make." A focus group which involved students has recently submitted its findings for publication, but Cummings "didn't want to wait another year to make changes."

Students have widely expressed disapproval of the new program on dining hall comment boards, in feedback to Bon Appetit, and in a petition launched by McCormick's dining chair yesterday. Chefs also expressed their discontent over the limitations on their creativity.

*The Tech* asked Cummings and Bauer if they were entirely unaware of student feedback to the pilot program in its current, mistaken form. They recalled receiving summaries of student dining comment cards and emails sent to foodstuff@mit.edu, several of which were "headscratchers" due to their references to dining food standardization.

Cummings said that it wasn't until Heads of House contacted Nelson, followed by *The Tech*'s emailing Carton about the protests and speculations concerning the new dining policy, that they began to say "oh, something's taken a left turn here," and it was not until the

uation. Cummings admitted that no MIT personnel had taken part in any internal Bon Appetit meetings, during which decisions on program implementation would have been made.

Cummings said that he and Carton worked with the management team from Bon Appetit over the summer to address these concerns, as part of a tradition of constant communication between Bon Appetit and MIT. Cummings said that Bon Appetit and Carton sometimes hold daily conversations on the student dining experience.

**"I'm sorry this... was implemented in a way that was not what we envisioned," Cummings told *The Tech*.**

Leading up to this initiative, the DSL had led an effort in conjunction with Dormitory Council dining chairs Kate Farris '17 and Mary K. Delaney '16 to gather data on student feedback to support changes which Cummings said

time of the interview that they realized the extent of homogeneity in dining food. Cummings confirmed that Nelson was not at the time aware of the program, which began to take shape during her predecessor's tenure.

Cummings's email yesterday to the dining community marked the first formal announcement by MIT administration about the new program, despite it having taken effect more than a week earlier.

Cummings accepted blame for allowing rumors and misconceptions to proliferate. "I'm going to take that on my shoulders as someone who should've anticipated that this had a cumulative effect of rippling out across the system," he said. He and his office,

gathered that Bon Appetit has not "had time to sit with all their staff."

A dining chef told *The Tech* yesterday that all the chefs had been instructed last week to serve the same main courses for any given meal. He added that two days previously, an order was communicated to the staff that the grill component of each night's dinner would resume being chef's choice, but that the other two components would remain the same across dining halls. The chef was under the impression that the order came through Cummings and the Office of Campus Dining.

When approached about this, Cummings replied that he "wouldn't say that the order that those two dishes should be standardized came from campus dining."

Cummings and Bauer expressed their eagerness for clarity and their desire to avoid putting out the wrong information.

Nelson wrote in an email to *The Tech* that "we will work with students to identify other ways to bring more variety, quality, and value to MIT diners in the short and long term."

"My lesson learned here," he continued, "is that we need to recognize that when we're asking partners to potentially alter [their service], that is something we need to present to the community."

During a phone conversation a few hours after the interview, Cummings said that his team "did go to see the menus" and they "can see where the students would be concerned with certain menu items being the same across dorms."

From chef feedback, Cum-

Cummings said, at no point anticipated "a change so noticeable that it demanded [an announcement]."

"Students should also know that they can come to my office hours and talk to me directly about dining or any other issue," she said. She would like "as many students as possible to drop in." Students can also "share their thoughts about next steps by emailing foodstuff@mit.edu or reaching out to their house dining chair, who will in turn share those thoughts with the House Dining Committee." Bauer said that the pause will go into effect "as soon as possible."
